## **Blueprint for the next decade of Finance**

*Responsible AI | Inclusive | Resilient*

The current global macroeconomic scenario presents unique challenges as well as opportunities.

The world is arguably more unsettled than at any point in recent history. Socio-political tensions, soaring interest rates, rising inflation, and tapering growth are creating a complex, once-in-a-generation challenge.

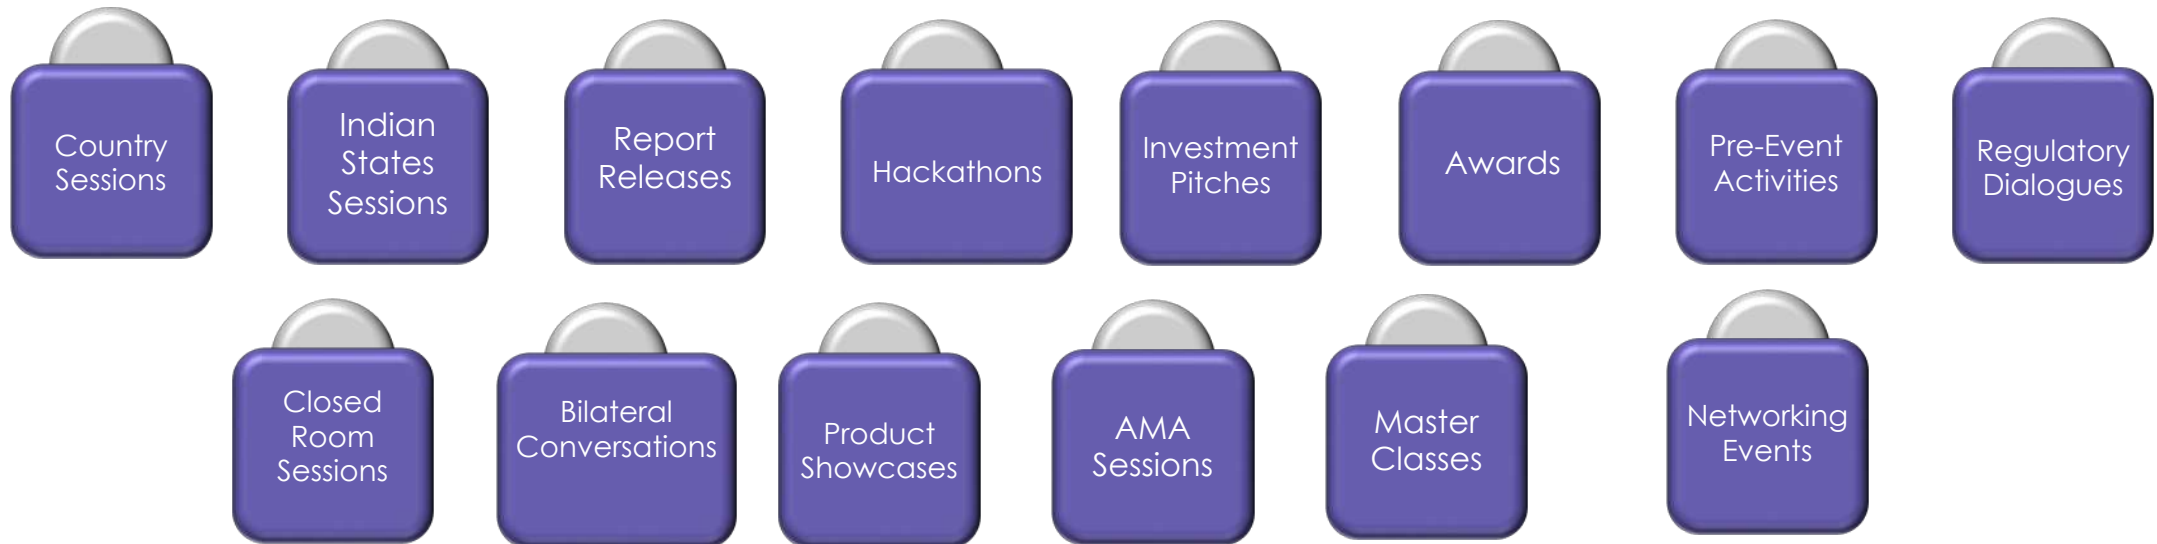

At the same time, critical and emerging technologies are growing exponentially and enabling us to shape a better future.

GFF aspires to take a pivotal position in solving key global financial ecosystem challenges. We are convening the best minds in Global Fintech together in Mumbai in August 2024 to design the blueprint for the next decade of finance.

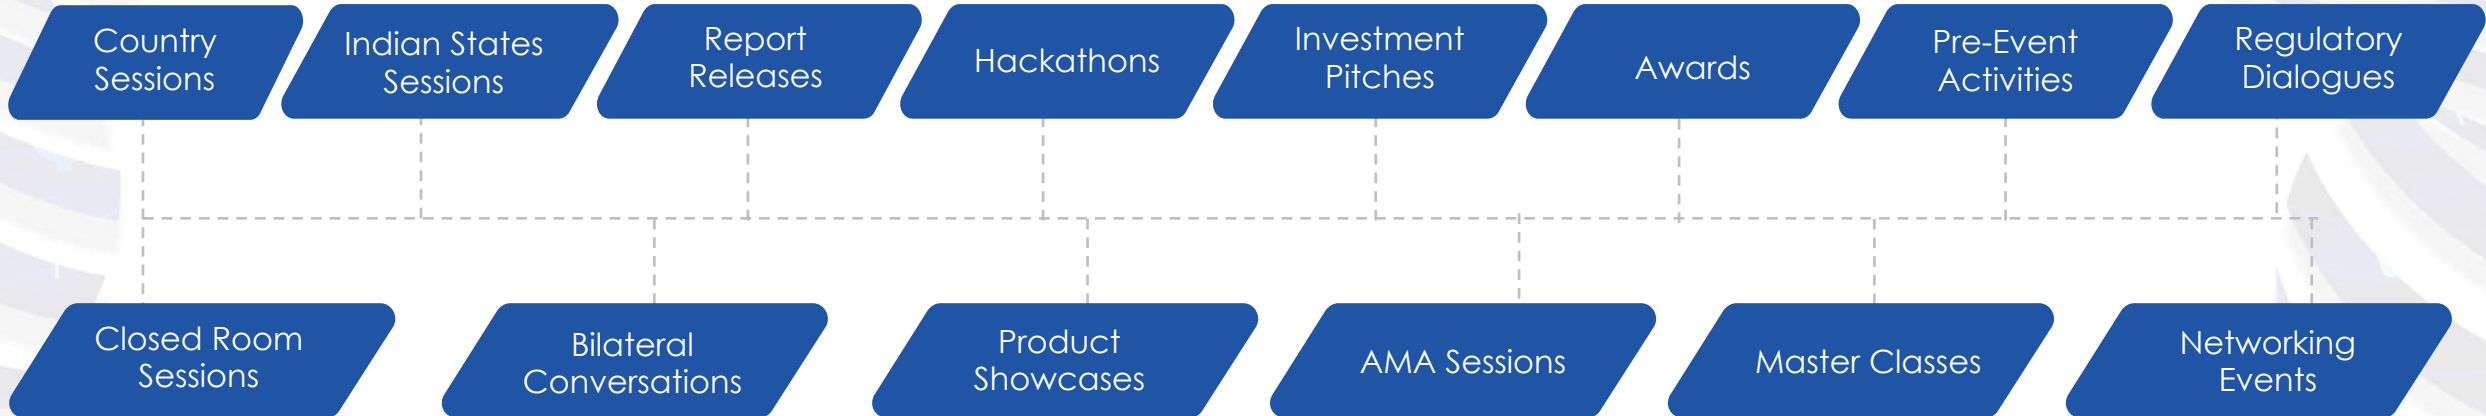

Artificial intelligence is at an inflection point. Harnessing AI responsibly and blending it with human insight can create the next-gen Financial Infratech to drive ethical, innovative solutions for complex, real-world challenges.

We envisage the next decade to be more equitable and inclusive and "resilient by design", to be able to recover quickly from future black swans.
